2. Citations and explanations**see separate sheet**

**WRITTEN OPINION
SEPARATE SHEET**

International application No. PCT/US03/02799

1. The closest prior art (JP-A-1 171 615, Document D1) describes a corrugated filter element in which the crests and valleys are folded against an adjacent flat sheet to effect a closure. This differs from the present claims, where closure is effected by folding the corrugation against itself, and not against the adjacent flat sheet. Presently claimed subject-matter is therefore novel.
2. It is not evident from the application documents what technical advantage or unforeseen effect results from the present folding. No inventive step can be recognised at the moment. The applicant is requested to explain any advantages, and why they would not be expected from D1.
3. Claims 1-18 do not fulfill the requirement of Article 33(3) PCT.
